

What Makes Herbs, Etc.'s ChlorOxygen® Chlorophyll Concentrate Such a Truly Unique Product?

It is preservative-free and alcohol-free.

Since ChlorOxygen® is low in water, it does not need preservatives like other chlorophyll products.

It's the MOST convenient liquid chlorophyll.

It's the only liquid chlorophyll that doesn't require refrigeration once opened. Other diluted liquid chlorophyll must be refrigerated after opening. ChlorOxygen is also available in convenient easy-to-carry softgels.

It offers superior value.

Liquid ChlorOxygen® is highly concentrated. It takes up to two 16 oz. bottles of the competition's chlorophyll to equal Herbs, Etc.'s one ounce bottle. So you know you're getting an excellent value for your money with liquid ChlorOxygen® chlorophyll concentrate.

It's the best tasting chlorophyll on the market.

More consumers choose Herbs, Etc.'s ChlorOxygen® for its pleasant taste over other chlorophyll brands. ChlorOxygen® is available in liquid Original fresh sweet grass taste, Mint flavor and easy-to-swallow softgels.

Original Mint Softgel Travel Pack

Some Questions and Answers About ChlorOxygen® Chlorophyll Concentrate.

Q: How much ChlorOxygen® should I use daily?

A: A daily intake of 100 to 200 mg of ChlorOxygen® is suggested. Take 18 to 36 drops or one to two softgels twice a day with water. Each 18-drops of liquid ChlorOxygen® or one ChlorOxygen® softgel delivers 50 milligrams of chlorophyll.

Q: Are there any known contraindications, toxicity or drug interactions that I should be aware of before I start taking ChlorOxygen®?

A: There are no known contraindications, toxicity or drug interactions associated with the use of ChlorOxygen®. On the market for over 20 years, Herbs Etc.'s ChlorOxygen® has been shown to be effective and has established a strong safety record.

Q: Are there any side effects associated with taking ChlorOxygen®?

A: Dark green stools are the only known side effects with taking ChlorOxygen®. This is normal and disappears upon discontinuing use of the product.

CAUTION: ChlorOxygen® chlorophyll concentrate will permanently stain fabrics, textiles, building materials, etc.

Build Better Blood

ChlorOxygen® Chlorophyll Concentrate

- Builds red blood cells
- Increases oxygenation
- Boosts energy levels
- Facilitates high altitude acclimation

IS FATIGUE, SHORTNESS OF BREATH AND EXHAUSTION A DAILY STRUGGLE?

Hi, I'm Daniel Gagnon, Medical Herbalist. The number one goal of my practice is to provide my clients with healthy results.

Do you have shortness of breath, fatigue, exhaustion, or the inability to walk far? You could be experiencing low blood oxygen. Low oxygen blood level may hinder a person's ability to enjoy life to its full potential.

In each case, increasing your blood oxygenation with the dietary supplement ChlorOxygen® chlorophyll concentrate can make a world of difference.

WHAT IS CHLOROPHYLL AND WHAT DOES IT DO?

Chlorophyll is the pigment that gives plant leaves their green color. It is involved with photosynthesis, the only source of oxygen on the planet. Using sunlight, water and carbon dioxide, chlorophyll starts the process of oxygen production.

Hemoglobin is the part of the red blood cells that carry oxygen from the lungs to the tissues and carbon dioxide from tissues to the lungs. Chlorophyll's chemical structure is almost identical to hemoglobin. Because both hemoglobin and chlorophyll are so intimately involved with

oxygen, chlorophyll has been called the blood of plants. Remarkably, by taking ChlorOxygen® chlorophyll concentrate along with an iron supplement, our body can use these two substances to rebuild red blood cells and hemoglobin. In doing so, your oxygen-carrying capacity is restored.

Stinging Nettle

HERE'S SIX WAYS THAT HERBS, ETC.'S CHLOROXYGEN® CHLOROPHYLL CONCENTRATE, CAN BENEFIT YOU:

CHLOROXYGEN® INCREASES THE AMOUNT OF OXYGEN AVAILABLE TO CELLS.

As red blood cells make their way through the lung capillaries, chlorophyll increases the hemoglobin's capacity to grab and hold oxygen. Almost immediately after taking ChlorOxygen®, you feel increased energy because your hemoglobin is actively grabbing and distributing oxygen throughout your body.

CHLOROXYGEN® SUPPORTS THE PRODUCTION OF RED BLOOD CELLS AND ITS BLOOD-OXYGEN CARRYING CAPACITY.

How much hemoglobin each red blood cell contains determines the oxygen-carrying capacity of the blood. When you don't have enough red blood cells or hemoglobin, you have oxygen-carrying problems.

When red blood cells and hemoglobin levels are low in the body, chlorophyll provides the building blocks needed to help build more of them. Since iron is essential in the production of hemoglobin, ChlorOxygen® is best when taken with a source of iron. Excellent iron sources include blackstrap molasses, dried fruits such as cherries, raisins or figs and liquid iron supplements. Within a week of a ChlorOxygen® and iron regimen, red blood cells and hemoglobin production increases noticeably. Healthy levels are typically achieved within two months.

CHLOROXYGEN® IS HELPFUL IN HIGH ALTITUDE SITUATIONS.

People coming from sea level to higher altitudes often complain of shortness of breath, fatigue, sleep problems and headaches. The reason this occurs is that at sea level, people have less hemoglobin in their red blood cells than high altitude dwellers, thus less oxygen-carrying capacity. ChlorOxygen® is useful in conditions where available oxygen levels are lower than normal, such as mountain hiking, skiing or when visiting areas where the elevation is significantly higher than the traveler's departure point.

To quickly acclimate to the new altitude, take ChlorOxygen® two weeks prior to going to a higher

elevation. For maximum benefits, continue this regimen for two months after arrival at the new altitude.

CHLOROXYGEN® COMES TO THE AID OF PREGNANCY.

Pregnant women who desire a home birth must maintain a minimum hematocrit level of 36%. Hematocrit is the volume of red blood cells (erythrocytes) packed by centrifugation in a given level of blood. If the hematocrit level falls below 36%, most midwives or medical doctors require a hospital birth.

Within a week or two of taking ChlorOxygen® and a good source of iron, most pregnant women experience an increased hematocrit level to the point where their midwives or medical doctors will consider a home birth.

CHLOROXYGEN® ACTS AS AN INTESTINAL DEODORIZER.

People with intestinal gas problems as well as individuals with colostomies (removal of part of the colon) use chlorophyll as an herbal support to control and minimize intestinal odor. Most health advisors suggest to their clients that they stay away from sulfur-containing foods such as cabbage, onions, garlic, Brussels sprouts and eggs. This may present a problem in depriving the patient of much-needed nutrients, as well as foods that the person enjoys. Regularly taking ChlorOxygen® and probiotics (such as acidophilus) helps keep this potentially annoying problem to a minimum and helps individuals enjoy the foods they like.

CHLOROXYGEN® OFFERS LIVER PROTECTION.

Chlorophyll, a food-grade derivative of the green plant pigment, has been demonstrated to protect the body by inhibiting specific toxins that may damage the functional cells of the liver. ChlorOxygen® supports a healthy liver.

WHAT'S IN CHLOROXYGEN® CHLOROPHYLL CONCENTRATE?

ChlorOxygen® chlorophyll concentrate is extracted from Stinging Nettle (*Urtica dioica* ssp. *dioica*) leaves. It is then suspended in distilled water and vegetable glycerine. Nothing more, nothing less.

CHLOROXYGEN® CHLOROPHYLL CONCENTRATE SATISFIES YOUR BODY'S HUNGER FOR OXYGEN.
