

Scratch, Scrape or Abrasion?

DermaCillin™

Topical Skin Spray

The skin is the body's largest organ and defends us against outside elements. Without our skin, we would quickly fall prey to bacteria and perish from water and heat loss. This barrier may be compromised by outside challengers, abrasions, nicks, cuts, scratches or scrapes. Once the integrity of the skin is broken, it is easy for intruders to find their way into our body where they can wreak havoc.

DermaCillin™ protects the skin against intruders, supports its integrity and stimulates its renewal process.*

DermaCillin™ supports the integrity of the skin by strengthening the bonds of hyaluronic acid, a component of healthy skin that makes our skin strong, resilient and resistant.* The herbs found in this formula have been shown to strengthen the skin's resistance to enzymes used by microorganisms to penetrate and overcome our first line of defense.* In effect, it offers specific protection against a type of bacteria (gram-positive) called *Staphylococcus aureus*; research shows that these herbs diminish the resistance of many newer strains of this microbe.* When used as a topical skin spray it strongly inhibits or stops the replication of unwanted microorganisms on the skin.* It offers specific insurance against skin challengers.* It soothes irritated

skin and decreases inflammation of the affected skin areas.* It improves the healing and regeneration of damaged skin tissue.* When used immediately after an abrasion, it helps prevent skin infections.*

DermaCillin™ is used to stimulate wound healing and reduce inflammation, particularly for slow-to-heal wounds, dermatitis, skin ulcers, bedsores, bruises, skin conditions, abrasions and contusions.* Besides its strong selective antimicrobial activity, this formula offers support to the body's natural defenses.* Furthermore, it possesses mild analgesic activity, thus helping reduce the pain that may be present.*

The standard medical approach to skin abrasions or irritations is to use creams or salves that require rubbing and further irritate the injured tissues. Since DermaCillin™ is applied as a topical skin spray, it requires no rubbing.

DermaCillin™ is a must for every household, office, and camp or wherever outdoor activities take place. Store in bathroom, kitchen, backpack or workshop.

DermaCillin™ contains usnea lichen, calendula flower, Oregon grape root, propolis gum, myrrh gum, yerba mansa root, and *Echinacea angustifolia* root in a base of grain alcohol, water and lavender essential oil

Discontinue use and consult with a doctor if condition persists or worsens.
